

CERTIFICATE OF COMPLETION

CAM VETERINARY PRACTITIONER

canine arthritis management

This is to certify that

ABDULKADRI IMAM

completed the

CANINE ARTHRITIS MANAGEMENT VETERINARY PRACTITIONER

A veterinary professional's guide to early identification and successful management of canine osteoarthritis

Completion of CAM Veterinary Practitioner entitles the veterinary professional to advertise their greater understanding of osteoarthritis in dogs, and through incorporation of their new knowledge into their professional work, they will offer their clients improved service provision.

10 CPD

COURSE COMPLETED ON: 28 Oct 2023

LEARNING OBJECTIVES

- Describe the biomechanical, biochemical, and morphological changes which occur within the osteoarthritic joint.
- Describe and recognise the different types of pain associated with osteoarthritis and understand their mechanisms and pathways.
- Describe the various analgesics available to treat the pain of canine and feline osteoarthritis and identify the pain pathways they act upon.
- Understand the evidence-based multimodal approach to canine arthritis management and describe the various modalities available to manage the disease.
- Confidently manage osteoarthritis cases from identification and diagnosis to formulating a multimodal management plan and navigating end of life care.
